O Action

Who would have thought Malaysia's population would have doubled to 28mn in the past 30 years, and grown by nearly 5mn in the past decade alone? To put this into perspective, the 5mn increase is more than the entire population of Singapore and close to Hong Kong's. Even less well known is the remarkable increase in the indigenous group or Bumiputera – mainly comprising the ethnic Malay population – which has more than doubled from 8.1mn in 1980 to an estimated 17.0mn this year.

Anchor themes

After close to a year of promoting the earnings upgrade story, we are introducing a brand new theme — Malaysia's consumption boom. The potential impact is underresearched and overlooked by the street, in our view.

Hile the consensus earnings upgrades cycle is likely to remain in positive territory, we believe that the Malaysia consumption boom story will be the next focus.

Malaysia Boleh #19: the untold story (I)

① Malaysia's consumption boom

Malaysia's population surprisingly has risen by nearly 5mn over the past decade, an increase that is more than the entire population of Singapore and close to Hong Kong's. Perhaps even less well known is the remarkable growth in the indigenous group or Bumiputera – mainly the Malay population, but also comprising aboriginal populations in Borneo – which has more than doubled from 8.1mn in 1980 to an estimated 17.0mn this year. The strong population growth has also seen household formation increase by 23% to more than 6mn over the past ten years.

② Young demographic

Given a relatively high birth rate, Malaysia has a young population base, with 50% of the population under the age of 25 years and 73% below the age of 40. The young population tends to consume more and is a key driver of consumption growth, in our view.

③ Strong surge in middle class

After 20 years of robust economic growth and development, not only has GDP per capita risen at a healthy pace, income levels are also more evenly distributed than they were in 1990. Some 55% of households now earn at least RM2,500/month compared to 60% of households earning less than RM1,000/month back in 1990. This has given rise to a much bigger middle-income consumer group and a meaningful bankable population, underpinning record car and property sales.

How to ride the consumption boom?

We recommend a group of stocks that we expect to be prime beneficiaries of the consumption boom. Our picks under this brand new theme are Maybank, Media Prima, Genting Malaysia, SP Setia, Malaysia Airline System, Axiata, QSR Brands, Evergreen Fibreboard, DiGi.Com and Alliance Financial Group.

NOMURA SECURITIES MALAYSIA SDN BHD

Stocks for action

We recommend a group of stocks which we believe will be the prime beneficiaries of the consumption boom in Malaysia.

Introducing a brand new theme

The untold story

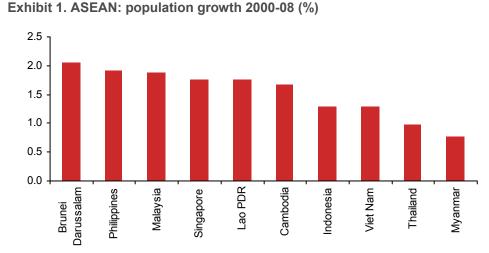

Significant potential to consumption boom overlooked

Malaysia's population has doubled to 28mn over the past 30 years, growing at an average 2.4% pa. In the past decade alone, the population has grown by nearly 5mn. To put this figure into perspective, the 5mn increase is larger than the entire population of Singapore and close to Hong Kong's population of 6.98mn.

According to government statistics, Malaysia has one birth every 58 seconds and a net increase in population of one person every 56 seconds. The population has grown at a rate of about 560K per year or nearly 2% pa over 2000-10. We estimate that the population in Malaysia will surpass 30mn by 2015F. Between 2000 and 2008, Malaysia recorded one of the fastest-growing population base within the Asean region.

In the past decade alone, Malaysia has seen surprisingly strong population growth that exceeds Singapore's entire population

Malaysia's population looks set to surpass the 30mn mark by 2015F

Source: UNESCAP

A large and growing Malay population

What we believe is more surprising and remains relatively over-looked is the significant increase in the indigenous group or Bumiputera, which consists mainly of the Malay population and now accounts for 60% of Malaysia's entire population (Malaysia also has a diverse if small group of indigenous non-Malays, including Borneo's Dayaks). This segment has more than doubled over the past 30 years from 8.1mn in 1980 to an estimated 17.0mn this year. The next largest ethnic group, the Chinese, has grown at a slower pace, from 4.4mn in 1980 to an estimated 6.5mn in 2010, and now accounts for 23% of the population (down from 32% in 1980). The decline here has largely been filled by non-citizens, mainly foreign workers that now comprise nearly 9% of the nation's headcount.

Government forecasts show the Bumiputera population growing at about 1.7% pa over the next five years (similar to the growth rate over 2000-10) to 18.5mn and accounting for 62% of the total population. The government expects the Chinese population to grow at a slower pace of 1.2% pa to 6.7mn, and the immigrant population to decline at about 2.2% pa through 2015F. Bumiputeras — mainly Malays have more than doubled over the past 30 years from 8.1mn in 1980 to about 17.0mn in 2010...

... and are likely to grow by about 1.7% pa over the next five years to 18.5mn

| | 1980 |) | 1990 |) | 2000 |) | 2010 | F | 2015 | F |

Young demographic

Given a relatively high birth rate, Malaysia has a young population base, with 50% of the population under the age of 25 years and 73% below the age of 40. The young population tends to consume more and is a key driver of consumption growth, in our view. Furthermore, the young population profile and high rate of household formation (2% pa growth) also feeds into demand for mortgages and car financing.

Some 50% of the population is under the age of 25 years

Source: CEIC

Strong GDP per capita growth ...

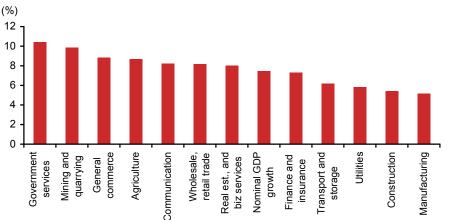

Even with the population growing at a clip, Malaysia enjoys a relatively high GDP per capita in the region. Its GDP per capita (in current terms) was US\$6,897 in 2008, comparing favourably with Thailand's US\$3,939 and Indonesia's US\$2,329. After PPP adjustment, the GDP per capita levels are at US\$14,082 for Malaysia, US\$8,232 for Thailand and US\$3,980 for Indonesia.

Malaysia's GDP per capita has risen at a decent pace of 9% pa since 2000. Sectors leading the growth have been government services, mining/quarrying, accommodation and restaurants (ie, tourism-related sectors), agriculture, telcos, general commerce and business services. If we could distil these into three main areas, they would be government, commodities and the services sector. Manufacturing, however, has lagged, expanding at just 5% pa.

Comparatively high GDP per capita growth, despite fast-growing population

NOMURA

Exhibit 4. Malaysia: nominal GDP growth 2000-2009

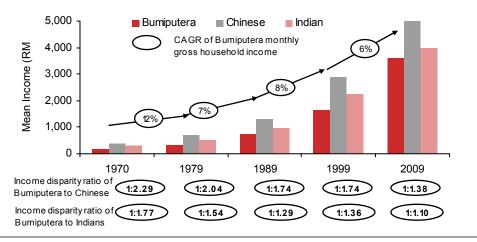

Source: Bank Negara Malaysia

... strong surge in middle-class consumers

After 20 years of robust economic growth and development, not only has GDP per capita risen at a healthy pace, income levels are also more evenly distributed than they were in 1990. Some 55% of households now earn at least RM2,500/month, compared to 60% of households earning less than RM1,000/month in 1990. This has given rise to a far bigger middle-income consumer group and a meaningful bankable population. Among the three major ethnic groups, Bumiputera household incomes have grown the fastest, at 6% pa over 1999-2009, narrowing the income gap between Chinese and Bumiputera households to 35% in 2007, from 43% in 1999.

A growing middle class means a meaningful bankable population...

Property sales reaching record highs ...

Residential property sales transactions in the top four states (Kuala Lumpur, Selangor, Penang and Johor) reached a record high of RM32.3bn in 2009. This was achieved in spite of the weak 1H09, which saw global recession and the worst GDP contraction since the 1998 economic crisis. Property sales in 4Q09 alone reached RM10.6bn for these states, up about 23% from the previous quarterly peak of RM8.6bn in 3Q07 and nearly quadruple the sales recorded in 4Q02.

... underpinning record property and auto sales

Source: Valuation and Property Services Department

... as are auto sales

Similarly, auto sales, a good indicator of consumer sentiment, have done very well, reaching record levels this year. Total vehicle sales rose by 21% y-y in 1H10, with all segments showing strong growth. Interestingly, in spite of the recession in 1H09, total passenger car sales held up, falling by a mere 2% y-y in 2009, owing to a strong rebound in the second half.

Structural changes have taken place

Fund flow data suggest that the structural re-rating story seems to be playing out well for Indonesia, which attracted inflow of US\$1.18bn in the year to date. This compares with Thailand's US\$93mn and Malaysia's US\$160mn over the same period. Despite being structurally wealthier, Malaysia is lagging behind in terms of attracting new fund inflows.

Malaysia's structural changes overlooked

Higher average crude oil and crude palm oil prices

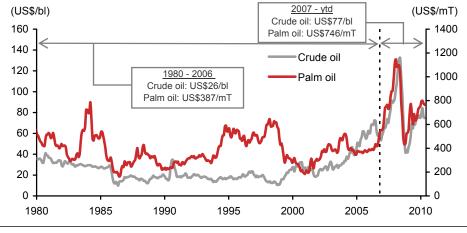

Thanks to high crude oil and crude palm oil prices, Malaysia is structurally a much stronger economy today than it was a decade ago, in our view. Directly and indirectly, taxes from oil and oil-related sectors account for as much as 70% of Malaysia's federal government revenue. The average crude oil price, which hovered at around US\$26/bbl between 1980 and 2006, has averaged at US\$77/bbl since 2007. Similarly, for crude palm oil, the average price since 2007 is 93% higher than the US\$387/mt seen between 1980 and 2006. With crude oil and crude palm oil prices trading at high levels since 2007, Malaysia as a whole is a richer country as a result.

Higher crude oil and crude palm oil prices have made Malaysia as a whole a much richer country

The effects of sustained high commodity prices are also finally filtering down to farmers and small settlers. From personal cars to mass-market property sales, all recent statistics point to significant potential upside in domestic consumption. In the past, small plantation settlers and planters were not profitable due to high production or planting costs. However, the commodities, cashflows and profitability have since significantly improved.

The benefits of stronger commodity prices are finally starting to filter down to farmers and small settlers

FINANCIALS/BANKS | MALAYSIA

Julian Chua

+60.3 2027 6892

julian.chua@nomura.com

O Action

With its high proportion of variable rate loans and low-cost deposits, AFG is positively leveraged to the rising interest rate environment. Furthermore, given its strong exposure to the consumer sector (60% of total loans), we expect average loan growth of 14% pa over the next three years. Maintain BUY.

🖊 Catalysts

Further OPR hikes by the Central Bank would benefit AFG. We perceive AFG as a potential M&A play if DBS seeks to establish a Malaysia presence.

Anchor themes

The anticipated turnaround in the economy this year will be the key growth driver for bank earnings. Rising loan growth, lower credit costs and stable margins should sustain strong earnings recovery.

Strong niche in consumer, SMEs

① Consumer, SME business accounts for 85% of total loans

Although the smallest domestic banking group with about 2% of assets and 3% loan market share, AFG has carved a niche for itself in the consumer and SME space operating from a network of 102 branches. Mortgages, which accounts for nearly 40% of total loans, clocked a CAGR of 21% over the past four years (vs industry: 9%).

② Civil service loans – the new growth area

Last year, AFG forged a partnership with the Angkasa cooperative to extend personal loans to government servants using the cooperative's network. Ticket sizes for these loans typically range from several thousand to RM30,000 for a duration of two to three years. Lending rates are high (we estimate in the mid-teens level) and the loan is secured on direct salary deduction from the employee. The loan book for this segment has already reached nearly RM1bn (from zero a year ago) and management aims to maintain the present run rate.

③ NIM on uptrend

AFG benefits from Bank Negara rate hikes as >80% of its loans are floating rate which reprices immediately, while low-cost current/savings deposits account for 41% of total customer deposits. We have built in a 42bps expansion in NIMs over the next two years to 2.44% on the assumption that the overnight policy rate will rise to 3.5% next year.

4 Stock still trades at reasonable valuations

AFG is trading at 1.5x P/BV, which is just above its post crisis mean P/BV of 1.4x. Given the strong loan growth, improving margins and good asset quality, AFG's EPS is expected to rise >30% over the next two years.

BUY

Share price relative to MSCI Malaysia

NOMURA NOMURA SECURITIES MALAYSIA SDN BHD

Nomura

Valuation methodology

Our price target of RM3.65 is based on FY12F fair value of RM3.98, rolled back to FY11F using a cost of equity of 8.55%. Our price target assumes a dividend payout of 40%, an ROE of 13.9%, a cost of equity of 8.55% and a terminal growth rate of 3.9%. It implies an FY11F P/E of 14.4x and P/BV of 1.6x.

Risks to our investment view

- Higher-than-expected loan charge-offs and sluggish loan growth if the domestic economy recovers more slowly than we expect
- Delay in further policy rate hikes by Bank Negara would result in slower margin expansion than forecast

NOMURA SINGAPORE LIMITED

O Action

Notwithstanding the solid revenue growth outlook, Axiata has been working on various group-level opex and capex savings initiatives. Our review of its cost items suggests a 130bp margin improvement this year and potential upside to our medium-term estimates. Additionally, Axiata's capex trends are likely to moderate, as it tries to improve its 7% ROIC versus an 8-13% cost of capital in different subsidiaries. Initiatives like network sharing (Bangladesh, Malaysia) and outsourcing of non-core activities are a key step in this regard. Maintain BUY.

🖊 Catalysts

Continued operational strength in domestic and overseas businesses remains the key catalyst. FY10F dividend guidance could positively surprise.

Anchor themes

The focus for Malaysian telcos is on driving data growth, both on handsets and WBB. Broadband penetration remains low, providing solid growth opportunity.

Upside from cost control

① Margins could positively surprise

Axiata's opex saving initiatives have been in focus since FY09, when margin improved by 100bps y-y to 39.4%; we expect another 130bp improvement this year. Based on our scenario analysis, a 100bp margin uplift would improve earnings by 5%. While Axiata's FY10F guidance implies a 40.1% margin, we see room for a positive surprise.

We believe that subsidiaries Robi and Dialog have meaningful scope to improve margins from 34% and 22%, respectively, in FY09. However, in terms of impact, Celcom and XL remain key – we expect a 200bp margin improvement for XL and an 80bp decline for Celcom this year. Over the medium term, margins are likely to trend lower by 20-30bps pa due to competition and higher contributions from the lower-margin data segments.

② Focus on returns to drive better ROIC

Apart from Celcom, the return on invested capital (ROIC) for Axiata's remaining subsidiaries remains below their cost of capital, ranging from negative at Dialog to 11% at XL. The current 0.4x sales to asset turn for Axiata suggests sub-optimal utilisation of existing assets and we believe this will drive cautious investments ahead. As such, we believe recent initiatives like asset sharing and outsourcing of non-core activities are likely to drive better asset utilisation and ROIC. The resulting capex savings should improve FCF. While currently, we estimate a RM3.0-3.4bn run-rate FCF pa over the next three years, implying a 9-10% yield, there could be upside surprise.

③ Valuation remains attractive

At 13.7x FY11F P/E and 5.7x EV/EBITDA, Axiata's valuation remains reasonable in view of its 9-12% average growth in revenue and earnings over the next three years.

BUY

Nomura vs consensus

Our above-consensus price target is driven by our expectation of continued growth at Celcom and XL, and easing investment risks.

Share price relative to MSCI Malaysia

Nomura

Valuation methodology

We use a DCF methodology in valuing the four key subsidiaries (Celcom, XL, Robi and Dialog), using WACCs of 7.7%, 12.8%, 7.7% and 8.0%, and terminal growth rates of 2.5%, 3%, 1.5% and 1.5%, respectively.

Risks to our investment view

Key downside risks include aggressive price competition, weaker-than expected takeup of wireless broadband in Malaysia, tariff wars and regulatory risks in Indonesia, India, Sri Lanka and Bangladesh.

O Action

Data growth remains a key opportunity for Digi, as the current 21% revenue contribution remains below peers' 30-35%. Improvement in postpaid and wireless broadband will be important drivers, in our view, and recent trends suggest Digi is making some headway. Its postpaid revenue contribution is now 29%, up 300bp y-y, while WBB net-adds have picked up to 45k, from 25-26k in prior quarters. Digi's 6% dividend yield remains sustainable, while under-geared balance sheet suggests a potential special dividend of 7-8% effective yield in 3Q10F. Reaffirm BUY.

🖊 Catalysts

Capital management and operational improvement in cellular and broadband metrics stand as potential catalysts.

Anchor themes

The focus for Malaysian telcos is on driving data growth, both on handsets and WBB. Broadband penetration remains low, providing strong growth opportunity.

Progress in postpaid, broadband

① 2Q10 : strong growth due to postpaid

In 2Q10, revenue and EBITDA increased 11% y-y each, while NPAT grew 19% y-y. Revenue and earnings were each ~3% ahead of consensus, driven by strong 25% y-y growth in postpaid while prepaid grew 7% y-y. Postpaid net-adds improved to 55k vs an average of 26k for the prior four quarters, while ARPU increased 1% both q-q and y-y. Prepaid was relatively weaker with 102k net-adds vs an average of 170k for the prior four quarters. ARPU declined 4% y-y in the quarter. Data now contributes 20.7% of mobile revenues, up 130bp y-y.

2 Revised margin guidance suggests better cost controls

Although FY10F revenue guidance of exceeding 5% revenue growth remains unchanged, we believe there is room for positive surprise, as 1H revenue was already up 8% y-y. At the same time, cost savings initiatives are underway and the company's improved EBITDA guidance to 'stable margins' from 'further pressure' is a reflection of that. We note that Digi's 43% EBITDA margin lags Celcom's 45% and Maxis' 50% - suggesting potential cost saving opportunity. We believe incoming CFO, Mr Borge has led such initiatives at Total Access Communication Public Company Limited (DTAC). The signing of the network sharing agreement with Celcom by the end of the year could be another key step in this direction, in our view.

③ Potential for a special dividend in 3Q10F

Digi's net-debt/equity remains below its stated target of 0.5x-0.8x. As such, we see scope for some incremental gearing and another special dividend in 3Q10F. Inclusive of a special dividend, the total yield could be 7-8%, on our estimates.

BUY

Share price relative to MSCI Malaysia

Nomura

Valuation methodology

We derive our price target using DCF valuation, assuming 7.8% WACC, 8.5% cost of equity, 5% cost of debt and 15% gearing. Our terminal growth rate is at 1%.

Risks to our investment view

Key risks to our rating and price target for DiGi include a continued macro slowdown, increased competition, pricing pressure and weaker-than-expected take-up of broadband services.

Balance sheet gearing remains low

Evergreen Fibreboard Bhd EVF MK

BASIC MATERIALS | MALAYSIA

Muzhafar Mukhtar Wai Kee Choong +60 3 2027 6891 +60 3 2027 6893

1 <u>muzhafar.mukhtar@nomura.com</u> 3 <u>waikee.choong@nomura.com</u>

O Action

EVF is well-positioned to capitalise on the global economic recovery. We expect earnings to rebound 70% in 2010 as the company's earnings begin to reflect capacity increases acquired during the recession. We believe the stock is inexpensive vs historical valuations, especially considering the company's improved fundamentals.

🖊 Catalysts

We think the street is underestimating EVF's earnings potential and believe earnings forecast upgrades will continue as the company posts better-thanexpected results in the next few quarters.

Anchor themes

Medium density fibreboard is the fastest growing primary wood product, and its consumption is closely correlated to GDP. We expect demand to improve most in regions emerging fastest from the recession.

Asia's third-largest producer still at just 5x FY11F P/E

Well positioned

Long-term medium density fibreboard (MDF) consumption trends indicate strong demand growth, particularly in Asia. With 85% of its sales exposure to Asian countries (including a direct presence in Indonesia, Thailand and Malaysia), the third-largest capacity in the region and improved cost control, EVF is well-geared for this.

② Selling price and costs still in line with our expectations

Signs of returning demand have continued to come through, with EVF reporting 7-8% ytd increases for its benchmark MDF prices in June. Raw material costs on the other hand have remained fairly flat, with EVF's rubberwood costs having declined 6% ytd in May, mitigating the 7% increase seen in resin prices.

3 Liquidity not as poor as widely believed

Whilst investor concerns regarding mandate limits on trading values/volumes are valid, we believe that the stock is more liquid than many people think. Various measures related to trading activity, price resiliency and spread tightness have indicated that on average, the stock's liquidity is actually on par with several FBMKLCI constituents.

4 Still inexpensive, reiterate BUY with RM3.41 price target

Whilst the stock price has risen 13% since 28 May 2010, compared to a 6% increase in the FBMKLCI, the stock still looks inexpensive at 4.8x FY11F P/E, vs its historical mean of 7.6x (using actual 12-month forward earnings). The closest comparable peers in Asia and South America, are trading at 8-13x, using Bloomberg consensus estimates. We reiterate our BUY call with a price target of RM3.41 based on 11x our 12-month forward earnings estimate. NOMURA

Nomura

Valuation methodology

To derive our price target of RM3.41 for EVF, we ascribe our 12-month forward earnings estimate a P/E of 11x, which is +1 standard deviation above the historical mean for EVF's 12-month forward P/E using actual earnings.

Risks to our investment view

Due to the high correlation between MDF consumption and GDP, a slower-thanexpected global economic recovery would likely cause MDF demand to recover at a slower rate. Given that a significant proportion of its sales comes from Asia Pacific and the Middle East (85% of FY09 revenue), slower-than-expected economic recoveries in these regions would impact EVF's sales and margins. Higher-than-expected costs would also cause EVF's margins to fall short of our expectations. As the company primarily does not hedge export sales, large and sudden currency swings may result in weaker-than-expected sales.

Genting Malaysia (GEMN), which owns Malaysia's only casino, is set to be one of

the prime beneficiaries of the country's consumption boom. At 4.5x FY11F

EV/EBITDA, it looks appealing on a risk-reward basis. Its recent proposed

August 2010, would likely be a catalyst for a re-rating of the stock.

GENM offers investors good exposure to the strong and rising domestic

lived. Its domestic operation should continue to generate strong cashflows.

acquisitions of UK and US casinos will exhaust most of its cash and remove concerns about how it would use its significant cash reserves. Maintain BUY.

Consensus earnings upgrades post 2Q10 earnings, scheduled to be released in

consumption story. Competition for its mass market business is likely to be short-

BUY

Closing price on 21 Jul RM2.70 Price target RM3.70 (set on 13 Jul 10) (set on 13 Jul 10) Upside/downside 36.9% Difference from consensus 34.9% FY11F net profit (RMmn) 1,336 Difference from consensus 6.1% Source: Nomura 1

Nomura vs consensus

There are more sell ratings on the Street. We recently raised our earnings estimates, and expect consensus to follow after the 2QFY10 results announcement.

| Key beneficiary of Malaysia |
|-----------------------------|
| consumption boom |

① Most bad news discounted

We expect Malaysia's consumption boom and rising GDP per capita to continue to drive earnings growth for GENM, which owns and runs the country's only casino. Its strong 14% jump in 1QFY10 gaming revenue underscores our view that the large middle class is largely responsible for driving consumption in the country. We expect GENM to be one of the prime beneficiaries of booming consumption.

2 Domestic operation could surprise on the upside

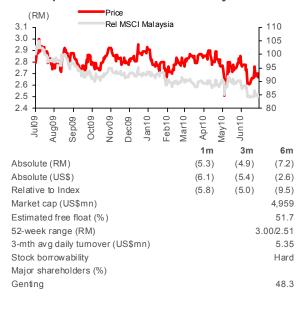

Despite increased competition from the two new casinos in Singapore, we expect GENM's earnings to decline only 0.5% in FY10F before rising by a modest 4.2% in FY11F. We still believe that the market-share loss in the mass market segment is temporary. The upcoming 2QFY10 earnings announcement (around end-August) is likely to provide a share-price catalyst, in our view.

③ Reaffirm BUY with a price target of RM3.70

In our opinion, GENM's long-term earnings prospects could also be lifted by its proposed acquisition of a UK casino business (see our note: Nothing much left to discount, 13 July, 10) and its proposed investment in a New York casino and race-course business (see our note: The only horse in the race, 6 July, 10). Trading at 4.5x FY11F EV/EBITDA, GENM may be the most inexpensive gaming stock globally, in our view, and even if we were to exclude the cash component, the stock would be trading at a 17% discount to the Asian gaming average of 9.5x FY11F earnings, based on Nomura estimates. We reaffirm our BUY call with a price target of RM3.70, representing potential upside of 36.9% from current levels.

NOMURA

NOMURA SECURITIES MALAYSIA SDN BHD

Valuation methodology

On average, GENM shares have traded at a 12% discount to discounted cashflow-(DCF) based RNAV since 1997. Applied to our DCF-derived RNAV estimate for FY10F, this translates into a price target of RM3.70/share. GENM's intrinsic value, if measured by the DCF model, comes to RM4.20/share (before discounts), on our estimates. In deriving this value, we have discounted its future cashflow by a weighted average cost of capital (WACC) of 9.7%. The WACC is derived from a cost of equity of 9.7%, a risk-free rate of 3.75%, an equity risk premium of 4.5% and beta of 1.32.

Risks to our investment view

Although we believe, to a large extent, that the fear of potential loss of revenue to the two Singapore casinos has been largely priced in, a shaper-than-expected fall in GENM's revenue would likely see the shares trading at a sharper discount to RNAV. Conversely, lower-than-expected losses in revenue could be an upside risk to our estimates and price target. The shares traded at up to a 45% discount to RNAV in 1998 and a 34% discount to RNAV in 2001.

O Action

We see MAS's turnaround story gaining traction with cost savings continuing to improve FY10F earnings, with a leg-up in FY11F as the bulk of its new fleet arrives to drive its yield-improvement strategy further. While headwinds remain in the form of competition and a potentially costly hedge, we reaffirm our BUY rating on the scope for upside coming from a low base with an added boost from its new fleet.

🖋 Catalysts

Catalysts for the stock are a better-than-expected rebound in passenger numbers and yield improvements occurring earlier than expected.

🖧 Anchor themes

Asia-Pacific airlines have rebounded faster than widely expected on growing penetration in the world's largest aviation market. We see competitive headwinds in FY10F for Malaysian airlines and prefer players with robust balance sheets and turnaround potential.

MAS fly

① Strong advance bookings; visibility now six months

In line with other airlines under the regional transport team's coverage, MAS is also seeing strong forward bookings – from three to four months visibility previously to six months currently. The company is seeing a better rebound in economy segments and consequently expects yields / volumes to trend upwards in 3Q/4Q10. On the back of a revival of Malaysian consumer confidence (from 1998-type lows), we highlight MAS as a potential beneficiary as the company estimates it commands a 50-60% market share of Malaysian outbound traffic.

② Fleet renewal benefits to accrue in FY11-12F

Given its fleet renewal kicks off from 4Q10F with five firm deliveries of new B738s, we expect this cost-driven turnaround to gather momentum in FY11-12F, as its fleet renewal increases fuel efficiency, resulting in an overall fall in cost/ASK by 5-7%. Similarly, its bid to improve yields is likely to take firm hold by then, as it replaces its ageing fleet. Headwinds remain in the form of high fuel hedging costs averaging US\$100/barrel for 60% of its needs should crude oil prices continue trending flat. However, we believe those concerns have largely been priced in, as MAS will still benefit from buying 40% of its fuel needs at a lower oil price vs our assumption of US\$85 for FY10F.

3 Balance sheet robust post RM2.67bn rights issue

With its rights issue completed in March 2010, MAS is now well placed to gear up for its firm deliveries of 56 aircraft until 2016. We see gearing hitting in FY12F at >1x, as MAS takes delivery of A380s.

④ Reaffirm BUY and price target of RM2.40

We reaffirm our BUY rating and price target of RM2.40, as we see MAS's yield improvement and cost reductions, driven by its fleet renewal strategy, yielding substantive improvements by FY11F.

Nomura vs consensus

Consensus is generally negative; our earnings forecasts are higher as we expect the cost-driven turnaround to gather momentum with fleet renewal to give higher yields.

Share price relative to MSCI Malaysia

Jacinda Loh

Valuation methodology

We have arrived at our price target by pegging it at 1.8x FY11F P/BV, at the mid-cycle of its historical valuations. At these levels, FY12F P/BV falls to 1.2x, narrowing the valuation gap between MAS and its peers.

Risks to our investment view

The key price target risks for MAS are the possibility of variance in passenger volumes/yields, oil prices and currency movements from Nomura estimates, as well as further delays of MAS's fleet deliveries. Current sentiment on the uncertainty of the strength of the economic rebound, political and environmental (i.e., the Eyjafjallajokull volcanic eruption in Iceland) headwinds could persist in the next few quarters, dampening its possible performance further.

Cost cutting to continue in FY10-12F, resulting in costs rising at a slower pace, while the top-line rebounds on improved yields

MAS has special exemption from the government, which exempts it from paying taxes on all sources of income until 2015; it needs only pays a minimal tax for overseas subsidiaries

Gearing to hit above 1x in FY12F as its A380s are delivered

Malayan Banking мау мк

FINANCIALS/BANKS | MALAYSIA

Julian Chua

+60 3 2027 6892

julian.chua@nomura.com

Maintained

O Action

Armed with the most visible banking franchise in Malaysia, Maybank looks well positioned to benefit from the growth in private consumption spending. The bank has beefed up its consumer division over the past 12 months and results are beginning to show. Reiterate BUY.

🖊 Catalysts

With foreign ownership still low at just 12.9%, investors remain sceptical on the stock. As more positive datapoints unfold, we expect an upward re-rating for Maybank.

Anchor themes

The economic recovery this year will be the key growth driver for bank earnings. Stronger loan growth, lower credit costs and stable margins should sustain a healthy earnings recovery from here.

Formidable consumer franchise

1 Best distribution network

Maybank has 382 branches nationwide, making it the most visible bank in Malaysia. By comparison, CIMB has 321 branches and Public Bank has 248. In terms of customer accounts, Maybank also leads the pack with 9mn customers, versus CIMB's 5.3mn and Public Bank's 5mn-plus. Because of its easy accessibility, low-cost current and savings deposit accounts make up 44% of total domestic customer deposits, far higher than the industry average of about 28%.

② Domestic consumer lending picking up

Maybank's domestic consumer loan growth lagged the overall industry rate between FY02-09. However, with management putting greater resources into this space (ie, building relationships with developers, a mobile sales force), the group's market share has started to stabilise and improve.

③ Improving asset quality

In 2Q FY10, the charge-off rate declined to 53bps, from 96bps in 1Q FY10, which was affected by several chunky NPLs. For 3Q FY10, the credit cost fell further to 35bps. In FY09, the provision charge was 108bps. Going forward, management aims to reduce the credit cost back to 50bps or less, essentially returning to FY08 levels.

4 Stock still trading at attractive levels

Maybank is trading just above its -1 standard deviation P/BV level. With ROE likely to trend higher to 15%, we expect the stock to gradually trend higher to its mean P/BV range of 2.4x. We maintain our BUY rating and price target of RM9.25. NOMURA

Nomura vs consensus

We are more optimistic than ever on BII and group asset quality. Our credit cost assumptions should take ROE to >15% by FY12F.

Share price relative to MSCI Malaysia

Julian Chua

Valuation methodology

Our DDM-based price target of RM9.25 assumes an FY11F dividend payout of 60%, ROE of 14.6%, cost of equity of 8.8% and terminal growth rate of 3.7%. Our price target implies FY11F P/E of 15.1x and P/BV of 2.1x.

Risks to our investment view

We see potential downside risks from: 1) a weaker-than-expected economic recovery, which could result in higher credit costs; and 2) a delayed operational turnaround of Bank Internasional Indonesia, which could drag down Maybank's group earnings.

julian.chua@nomura.com

O Action

With our economics team forecasting strong economic growth of 7% for 2010, we expect the TV adex recovery in Malaysia to kick in, while the acquisitions of NSTP and an outdoor competitor will likely also contribute this year. We expect a strong earnings CAGR of 34% over the next three years. Maintain BUY.

🖊 Catalysts

The big advertising clients are increasing their adex budgets having scaled back last year amid the worst domestic slowdown since the 1998-99 economic crisis.

Anchor themes

Our favoured media space is television advertising, given Malaysia's favourable demographic profile (growing middle class, young population). We believe TV will continue to take adex market share from print over the next three years.

Mainstream media play

Dominance in free-to-air TV, Malay print

MPB operates all four private free-to-air TV stations in Malaysia compared to the government's two stations. It controls an estimated 75% of total TV gross adex and enjoys 50% viewership share. It also publishes Harian Metro, the leading Malay daily newspaper with circulation of ~400K copies (market share of 36%). By comparison, the leading English daily – The Star – has a circulation of 300K.

2 Adex on cyclical recovery

Due to the recession, Malaysia's adspend on TV declined an estimated 6% y-y in 2009. Advertisers scaled back their budgets, while media companies offered heavier discounts, especially to lower-yielding small- and medium-sized companies. This year, more than 70% of the top 20 advertisers have already put in a full-year TV adex commitment, compared to just 60% for the whole of last year.

3 Print sector – gaining market share, better cost control

Although structurally print media has been losing adex share to TV, we expect MPB's newspaper subsidiary to outperform given strong circulation growth for its Malay daily, Harian Metro. This was one of the few dailies to record circulation growth in 2009 (currently at ~400K, up from 350K in 1H09).

4 Stock trades in line with regional peers

MPB trades at an FY11F EV/EBITDA of 7.2x vs the regional average of 9.0x. If we exclude India, the regional EV/EBITDA would be 7.0x, on our estimates. On a P/E basis, the stock trades at 16x FY11F earnings, also fairly consistent with region (ex-India) P/E of 15.5x, on our estimates.

Share price relative to MSCI Malaysia

NOMURA

NOMURA SECURITIES MALAYSIA SDN BHD

Valuation methodology

Our 12-month DCF-based price target of RM2.50 uses a discount rate of 10.3% and a terminal growth rate of 2%. Our discount rate assumes a risk-free rate of 3.75%, a market risk premium of 5% and a beta of 1.3x.

Risks to our investment view

If the global economic recovery is slower than expected, consumer demand/sentiment and ultimately advertising spending will follow. Forex changes – further depreciation of the ringgit could lead to significantly higher costs of programme content and newsprint. Competition – If competitors become more aggressive in gaining TV ad market share, it may result in greater discounting for ad space.

Share price relative to MSCI Malaysia

O Action

As per the latest sales update of end-June, 82% of this FY's sales target of RM2bn is now reached. The strong sales mirrored the bullish macro picture, which our economists believe is sustainable. We think the upcoming launch of KL Eco City is a catalyst to re-rate the stock in terms of addressing market concerns over the execution of the project and the sustainability of property sales growth. BUY.

🖊 Catalysts

Better-than-expected FY10F sales achieved by SPSB relative to the RM2.0bn target set and KL Eco City's launch.

Anchor themes

Demand fundamentals should underpin a sustained recovery in the Malaysia property market over the next 12 months. While a key risk remains higher interest rates, this should not alter the affordability picture significantly, especially with household income likely to rise in tandem with economic growth.

FY10F sales target 82% reached

① RM1.64bn in sales achieved as of end-June

The company recently issued a sales update as of end-June — RM1.64bn in sales value was achieved during the first eight months of this FY, or 82% of this FY's sales target of RM2bn. The strong property sales mirrored the overall bullish macro picture in Malaysia — our economists raised our GDP forecast for 2010F twice in the first five months of this year and they believe the robust industrial production numbers point to sustained momentum that will provide another strong GDP number in 2Q10. As per our report published on 19 May (*Sales boost to underpin re-rating*), real GDP typically leads property sales by two to three quarters in Malaysia and achieved property sales typically drive SPSB's stock valuation.

2 Lower sales in 3Q as company slows launches

The slower sales value of RM199mn achieved in 3Q10 was more on account of the company slowing launches as the sales target is reached, in our view. The only new product that was launched in 3Q10 was Setia Walk Tower 3 in Puchong where 124 units out of the c. 178 non-Bumi units were sold during the quarter at an average of RM420,000/unit (average price of RM360,000/unit for Tower 2 launched earlier this year).

③ Maintain BUY rating with price target RM5.06

At FY11F yield of 3.4% and 18% discount to NAV of RM5.06, we believe valuation remains attractive. We see the upcoming launch of KL Eco City as the key catalyst to re-rate of the company in two ways: 1) to address the market's concern over the company's execution of a large-scale commercial/residential mixed development; and 2) to address concern over the sustainability of growth in property sales that can be achieved by the company in the next two to three years.

Valuation methodology

We peg our 12-month price target for SPSB at parity to our estimate of its intrinsic NAV of RM5.06/share, based on our GDV estimates for its projects and a discount rate of 12% (used to derive the NPV of each project).

Risks to our investment view

Any project delays or disappointing take-up rates could dent our earnings forecasts. In addition, the bulk of the portfolio is represented by projects in Malaysia, especially in Johor and Klang Valley, giving rise to product concentration risk.

Expanding ROE driven by asset turn and improving margin

QSR Brands Berhad QSR MK

CONSUMER RELATED/FOOD & BEVERAGE | MALAYSIA

Jacinda Loh

+60 3 2027 6889

jacinda.loh@nomura.com

O Action

Against a backdrop of favourable demographics, QSR is the most diversified KFC franchise owner in the region, with 830 KFC and Pizza Hut stores across ASEAN and India. We see 12-40% earnings growth over the next three years, driven by a young and high poultry-consuming population. Strong catalysts also exist via its start-up India presence. Its single-digit FY11F P/E compares favourably historically and versus its peers. We initiated on QSR on 21 July with a BUY; PT of RM5.47

✓ Catalysts

1) Continued store openings in Malaysia and India; 2) sustained positive consumer sentiment; and 3) confidence in robust economic recoveries across the region.

Anchor themes

Strong GDP forecasts out of ASEAN and India are likely to spur an F&B demand recovery, with fast-food operators such as QSR benefiting from young populations and rising incomes across a diversified geographical base.

Lickin' good in India and ASEAN

1 Buy KFC get "free" pizza

QSR is trading both at a 43% discount to its four-year mean and below its peers' P/Es (in the teens). The market appears to value QSR's 50% stake in listed subsidiary KFC Holdings Berhad at >100% of QSR's share price, implying a complete discount on the steadily performing Pizza Hut and KFC Cambodia operations (unlisted, directly under QSR), which together contribute about 20% to EBIT. Our price target implies a target multiple of 12x, midway between the stock's historical mean and -1SD.

② ASEAN region a robust growth contributor

GDP growth of 7% and 15.5% in 2010F for Malaysia and Singapore, respectively, augurs well for QSR, which generates 80% of its revenue from its KFC / Pizza Hut stores in those markets. We expect 40% EPS growth in FY10F on a double-digit same-store sales increase (albeit off a low base). Also, as Malaysia has a young, high poultry-consuming population, we see further growth in this market, given QSR's low urban penetration of 28%, vs ~50% at peers such as McDonalds.

③ New India presence could chart higher trajectory

KFC's low India penetration (half of McDonalds), similar favourable demographics and average sales starting at almost double those of Malaysia should give growth a leg up and provide sustainable growth prospects. Expansion from two to 30 stores by FY12F is planned.

④ Supply chain ownership is a focus

Plans for further expansion into broiler farms should, in our view, complete the missing "link" in QSR's ownership of the supply chain, enabling up to 20-30% of chicken needs to be supplied internally, to reduce dependence on contract farmers.

BUY

Nomura vs consensus

Source: Nomura

Broker coverage is limited; forecasts are wide ranging. We are above consensus as we see a better-thanexpected recovery in its Malaysian business and are positive on its new India foray.

Share price relative to MSCI Malaysia

NOMURA

NOMURA SECURITIES MALAYSIA SDN BHD

46

Valuation methodology

We value QSR on FY11F diluted EPS of RM0.456, applied to our PE target multiple of 12x, the average between its 4 year historical mean and -1SD level to arrive at our PT of RM5.47.

Risks to our investment view

Downside risks include: 1) non-renewal of the franchise licence with Yum! after the 10+10-year contract period, 2) deteriorating domestic consumer confidence on worries of a double dip in QSR's key markets and 3) fewer-than-expected store openings.

As at 30 June 2010.

*The Nomura Group as defined in the Disclaimer section at the end of this report.

Explanation of Nomura's equity research rating system in Europe, Middle East and Africa, US and Latin America for ratings published from 27 October 2008

The rating system is a relative system indicating expected performance against a specific benchmark identified for each individual stock. Analysts may also indicate absolute upside to price target defined as (fair value - current price)/current price, subject to limited management discretion. In most cases, the fair value will equal the analyst's assessment of the current intrinsic fair value of the stock using an appropriate valuation methodology such as discounted cash flow or multiple analysis, etc.

STOCKS

A rating of 'Buy', indicates that the analyst expects the stock to outperform the Benchmark over the next 12 months.

A rating of 'Neutral', indicates that the analyst expects the stock to perform in line with the Benchmark over the next 12 months.

A rating of 'Reduce', indicates that the analyst expects the stock to underperform the Benchmark over the next 12 months.

A rating of '**RS-Rating Suspended**', indicates that the rating and target price have been suspended temporarily to comply with applicable regulations and/or firm policies in certain circumstances including when Nomura is acting in an advisory capacity in a merger or strategic transaction involving the company.

Benchmarks are as follows: United States/Europe: Please see valuation methodologies for explanations of relevant benchmarks for stocks (accessible through the left hand side of the Nomura Disclosure web page: <u>http://www.nomura.com/research</u>);Global Emerging Markets (ex-Asia): MSCI Emerging Markets ex-Asia, unless otherwise stated in the valuation methodology.

SECTORS

A 'Bullish' stance, indicates that the analyst expects the sector to outperform the Benchmark during the next 12 months.

A 'Neutral' stance, indicates that the analyst expects the sector to perform in line with the Benchmark during the next 12 months.

A 'Bearish' stance, indicates that the analyst expects the sector to underperform the Benchmark during the next 12 months.

Benchmarks are as follows: United States: S&P 500; Europe: Dow Jone's STOXX 600; Global Emerging Markets (ex-Asia): MSCI Emerging Markets ex-Asia.

Explanation of Nomura's equity research rating system for Asian companies under coverage ex Japan published from 30 October 2008 and in Japan from 6 January 2009 STOCKS

Stock recommendations are based on absolute valuation upside (downside), which is defined as (Price Target - Current Price) / Current Price, subject to limited management discretion. In most cases, the Price Target will equal the analyst's 12-month intrinsic valuation of the stock, based on an appropriate valuation methodology such as discounted cash flow, multiple analysis, etc.

A 'Buy' recommendation indicates that potential upside is 15% or more.

A 'Neutral' recommendation indicates that potential upside is less than 15% or downside is less than 5%.

A 'Reduce' recommendation indicates that potential downside is 5% or more.

A rating of '**RS'** or '**Rating Suspended'** indicates that the rating and target price have been suspended temporarily to comply with applicable regulations and/or firm policies in certain circumstances including when Nomura is acting in an advisory capacity in a merger or strategic transaction involving the subject company.

Stocks labelled as 'Not rated' or shown as 'No rating' are not in Nomura's regular research coverage.

SECTORS

A 'Bullish' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a positive absolute recommendation.

A 'Neutral' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a neutral absolute recommendation.

A 'Bearish' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a negative absolute recommendation.

Explanation of Nomura's equity research rating system in Japan published prior to 6 January 2009 (and ratings in Europe, Middle East and Africa, US and Latin America published prior to 27 October 2008) STOCKS

A rating of '1' or '**Strong buy'**, indicates that the analyst expects the stock to outperform the Benchmark by 15% or more over the next six months.

A rating of '2' or '**Buy'**, indicates that the analyst expects the stock to outperform the Benchmark by 5% or more but less than 15% over the next six months.

A rating of '3' or 'Neutral', indicates that the analyst expects the stock to either outperform or underperform the Benchmark by less than 5% over the next six months.

A rating of '4' or 'Reduce', indicates that the analyst expects the stock to underperform the Benchmark by 5% or more but less than 15% over the next six months.

A rating of '5' or 'Sell', indicates that the analyst expects the stock to underperform the Benchmark by 15% or more over the next six months. Stocks labeled 'Not rated' or shown as 'No rating' are not in Nomura's regular research coverage. Nomura might not publish additional research reports concerning this company, and it undertakes no obligation to update the analysis, estimates, projections, conclusions or other information contained herein.

SECTORS

A 'Bullish' stance, indicates that the analyst expects the sector to outperform the Benchmark during the next six months.

A 'Neutral' stance, indicates that the analyst expects the sector to perform in line with the Benchmark during the next six months.

A 'Bearish' stance, indicates that the analyst expects the sector to underperform the Benchmark during the next six months. Benchmarks are as follows: Japan: TOPIX; United States: S&P 500, MSCI World Technology Hardware & Equipment; Europe, by sector -

Hardware/Semiconductors: FTSE W Europe IT Hardware; *Telecoms*: FTSE W Europe Business Services; *Business Services*: FTSE W Europe; *Auto & Components*: FTSE W Europe Auto & Parts; *Communications equipment*: FTSE W Europe IT Hardware; **Ecology Focus**: Bloomberg World Energy Alternate Sources; **Global Emerging Markets**: MSCI Emerging Markets ex-Asia.

Explanation of Nomura's equity research rating system for Asian companies under coverage ex Japan published prior to 30 October 2008

STOCKS

Stock recommendations are based on absolute valuation upside (downside), which is defined as (Fair Value - Current Price)/Current Price, subject to limited management discretion. In most cases, the Fair Value will equal the analyst's assessment of the current intrinsic fair value of the stock using an appropriate valuation methodology such as Discounted Cash Flow or Multiple analysis etc. However, if the analyst doesn't think the market will revalue the stock over the specified time horizon due to a lack of events or catalysts, then the fair value may differ from the intrinsic fair value. In most cases, therefore, our recommendation is an assessment of the difference between current market price and our estimate of current intrinsic fair value. Recommendations are set with a 6-12 month horizon unless specified otherwise. Accordingly, within this horizon, price volatility may cause the actual upside or downside based on the prevailing market price to differ from the upside or downside implied by the recommendation.

A 'Strong buy' recommendation indicates that upside is more than 20%.

A 'Buy' recommendation indicates that upside is between 10% and 20%.

A 'Neutral' recommendation indicates that upside or downside is less than 10%.

A '**Reduce'** recommendation indicates that downside is between 10% and 20%.

A 'Sell' recommendation indicates that downside is more than 20%.

SECTORS

A 'Bullish' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a positive absolute recommendation.

A 'Neutral' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a neutral absolute recommendation.

A 'Bearish' rating means most stocks in the sector have (or the weighted average recommendation of the stocks under coverage is) a negative absolute recommendation.

Price targets

Price targets, if discussed, reflect in part the analyst's estimates for the company's earnings. The achievement of any price target may be impeded by general market and macroeconomic trends, and by other risks related to the company or the market, and may not occur if the company's earnings differ from estimates.

DISCLAIMERS
